Made in USA

MC.1-SS Control System

The MC.1 is a two part control system for air suspension vehicles consisting of a handheld control unit and the accompanying receiver/driver module. Microprocessors and solid statedrivers offer fast, reliable response while communicating with each other over a single wire, making the unit easy to install and flexible to move.

There are (2) multi-conductor cables and (4) individual wires in the receiver harness. The 8 conductor cable is the output to the valve, the other cable is a USB-C cable for the hand-unit. Please follow these instructions for wiring your MC.1

WARNING DO NOT mount the receiver in the area that could be exposed to moisture - The receiver is not water tight and can be damaged if wet

Product Contents:

- (1) Hand Unit
- (1) Receiver Unit
- (1) Receiver Harness
- (1) Mounting Clip
